Accompanying Notes Concerning Performance Calculation and GIPS® Compliance

- This composite was created in September 2007.
- Past performance is not a guarantee of future results.
- A complete list and description of all firm composites is available on request.

Mondrian Investment Partners Limited ("Mondrian") claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the Global Investment Performance Standards (GIPS®). Mondrian has been independently verified for the periods 1 January 1993 to 31 December 2019.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Additional third party Performance Examination under GIPS of this composite's results has also been undertaken from 1 September 2007 to 31 December 2019. The verification and performance examination reports are available upon request.

The Firm is defined as all discretionary portfolios managed by Mondrian. Mondrian is a value-oriented defensive manager seeking to achieve high real returns for its clients. Mondrian invests mainly in securities where rigorous dividend discount analysis identifies value in terms of the long-term flows of income. Mondrian's methodology is applied consistently to markets and individual securities, both bonds and equities.

The Global Debt Opportunities Fixed Income Composite includes U.S. dollar based discretionary fee paying portfolios, measured against a customised index consisting of the monthly U.S. dollar returns of the FTSE WGBI (80% weighting) and the JP Morgan GBI EM Global Diversified Index (20% weighting) gross of withholding taxes (previously measured against a customised index consisting of the monthly U.S. dollar returns of the JP Morgan GGBI (80% weighting) and the JP Morgan GBI EM Global Diversified Index (20% weighting) gross of withholding taxes to January 1, 2017). The portfolios are invested in global bonds and target a 20% exposure to emerging market debt.

Total Firm Assets are assets for which the firm has investment management responsibility. Composite assets are assets for composite qualifying portfolios for which the firm has investment management responsibility. Firm advisory assets are assets for all strategies within the firm for which Mondrian provides investment recommendations only; trading and implementation of the investment decisions is independent.

Portfolios are valued on a trade date basis using accrual accounting. Returns are calculated using the modified Dietz method and then weighted by using beginning-of-period market values to calculate the monthly composite returns. Portfolio returns are calculated net of irrecoverable withholding tax on dividend income. New portfolios are included in the first full month of investment in the composite's strategy. Terminated portfolios remain in the composite through the last full month of investment. Additional information regarding the valuing of portfolios, calculating performance, and preparing compliant presentations are available upon request.

Composite and benchmark standard deviation are measured as the rolling 3 year annualised standard deviation of monthly returns. The dispersion of annual returns of portfolios within the composite (Composite Dispersion), is measured by the standard deviation of the equal-weighted returns of portfolios represented within the composite for the full year.

Performance results marked "Gross" do not reflect deduction of investment advisory fees. Investment returns will be reduced accordingly. For example, if a 1.00% advisory fee were deducted quarterly (0.25% each quarter) and the three year gross annual returns were 10.00%, 3.00% and -2.00%, giving an annualized return of 3.55% before deduction of advisory fees, then the deduction of advisory fees would result in three year net annual returns of 8.91%, 1.98% and -2.97% giving an annualized net return of 2.52%.

Performance returns marked "Net" reflect deduction of investment advisory fees and are calculated by deducting a quarterly indicative fee from the quarterly composite return. The indicative fee is defined as being the effective fee rate (or average weighted fee) at the composite's minimum account size as set out below. Actual net composite performance would be higher than the indicative performance shown because some accounts have sliding fee scales and accordingly lower effective fee rates.

Mondrian's investment advisory fees are described in Part II of its Form ADV. A representative United States fee schedule for institutional accounts is provided below, although it is expected that from time to time the fee charged will differ from the below schedule depending on the country in which the client is located and the nature, circumstances requirements of individual clients. The fees will be charged as follows: the first US\$50m at 0.50%; the next US\$50m at 0.44%, the next US\$100m at 0.40%; thereafter at 0.36%. Minimum segregated portfolio size is currently US\$50 million (or fees equivalent thereto).
