Monthly Commentary for June 2021

Market Background

In June, the FTSE World Government Bond Index rose 0.5% in euro hedged terms. The strongest performing markets were Australia (+1.2%), Canada (+0.8%) and the UK (+0.7%). The weakest performing markets were Mexico (-1.0%), Singapore (-0.3%) and Japan (+0.0%).

Over the second quarter as a whole, the FTSE World Government Bond Index rose 0.6% in euro hedged terms. The strongest performing markets were Australia (+2.1%), the US (+1.7%) and the UK (+1.7%). The weakest performing markets were Poland (-0.9%), the Eurozone (-0.7%) and Mexico (-0.5%).

Investment Performance

The Fund lagged the benchmark index by 0.12% in June. The underweight to the US detracted from performance over the month, as did the underweight to the relatively strong UK market. These positions were partially offset by the overweight to the Mexican peso at the start of the month.

Over the second quarter as a whole the Fund lagged the performance of the benchmark index by 0.09%, leaving the Fund up 0.48% in absolute terms. Performance drivers were similar to June. The underweight to the UK market detracted from performance over the quarter, whereas the modest overweight position to the Mexican peso added to performance over the quarter.

Investment Outlook

In Japan, as elsewhere, inflation is likely to rise as the economy recovers, albeit it very modestly. But, unlike elsewhere, nominal yields have not picked up as much. This has meant that the Japanese bond market performed relatively well in the early part of this year when set against those markets that have seen sharp rises in nominal yields. However, it does also mean that Japanese bond valuations no longer look as appealing for global unhedged mandates. Consequently, we have pared back exposure to Japanese duration towards a more neutral stance on such strategies.

Overall, among investment grade global bond markets, those with relatively attractive Prospective Real Yields (PRYs), where we are overweight, include Malaysia, Mexico and Singapore. Soon-to-be FTSE World Government Bond Index member China also looks relatively attractive in PRY terms, and we are overweight on developed market mandates that can already hold it. At the same time, we are underweight to the bond markets of the Eurozone, the UK, and broadly neutral to the bond market of Australia.

In terms of currency exposure, we remain underweight to the US dollar on global unhedged mandates, the US dollar still being overvalued according to our PPP models. We are correspondingly overweight to the best value international currencies – the Japanese yen, the Malaysian ringgit, UK sterling, the Polish zloty and Norwegian krone.

Investment Strategy

- Underweight Eurozone (exposure to France, Germany and Italy)
- Underweight to the UK
- Slightly overweight Norway, partially hedged
- Overweight Mexico, fully hedged.
- Broadly neutral to Australia
- Underweight to the US
- Slightly underweight Canada
- Overweight Japan
- Overweight China
- Overweight Singapore

Fund Transactions

Due to changes in Prospective Real Yields, we reduced exposure to Japan in June, using the proceeds to add to the US. We also removed exposure to the Mexican peso in June.

Important Notes

1. Calculations for Average Coupon, Average Maturity, Modified Duration, Average Quality, and Yield to Maturity are based on generally accepted industry standards. All Fund characteristics are derived by first calculating the characteristics for each security, and then calculating the weighted-average of these values for the Fund. The details of exact calculations can be provided upon request.
2. Past performance is not indicative of future results. An investment in the Fund involves the risk of loss. The investment return and value of Shares in the Fund will fluctuate. When a redemption is made, the Shares may be worth more or less than when originally purchased.
3. There can be no assurance that the investment objectives of the Fund will be achieved.
4. The Fund is managed in accordance with the investment objective and guidelines and other terms and conditions described in the Prospectus and Fund Supplement. The Fund is not managed in accordance with the individual guidelines of any one investor.
5. The Total Assets of the Fund and the Fund Return are calculated using the official Net Asset Value data of the Fund. All other information has been calculated using Mondrian's accounting system data, which may differ from official Net Asset Value data of the Fund, for example because of timing of the accounting of Administrative Expenses and pricing for securities.
6. All performance information provided in this Fund Overview is net of Transaction Expenses, Administrative Expenses and Management Fees (each as described in the Supplement to the Prospectus).
7. The FTSE World Government Bond Index is a market weighted index of world government fixed income securities in which the total market value of the constituent countries is at least \$25 billion.
