## Quarter 1, 2024 - Main Highlights

Global markets got off to a strong start to the year with the S&P 500 and NASDAQ both hitting multiple new highs in the period, in part because excitement continued to grow over the potential for artificial intelligence. In addition, the Federal Reserve maintained its view that interest rates would be cut three times this year, despite data showing inflation was running higher than initially expected. The interest rate sensitive real estate and utilities sectors were notable underperformers as the market's expectations for rate cuts in 2024 was reduced. The communication services and IT sectors were the standout performers. Within the IT sector, the semiconductor sub-industry was particularly strong, outperforming the broader market by ~25% as companies reported strong sales on the back of AI-related investments.

The Fund underperformed on the back of negative sector allocation, weak stock selection, and adverse currency movements. Overweight exposure to the consumer staples and utilities sectors, as well as underweight exposure to the IT sector, detracted from relative returns. Stock selection in Italy was negative, as our utility holdings lagged the broader market on the back of changing interest rate expectations. Overweight exposure to the yen was another key headwind in the period after the Japanese currency reversed all of the gains seen at the end of last year.
